Managed EDR vs Traditional Integrations

A Comprehensive Comparison

Managed EDR | Streamlined managed endpoint security

Complimentary Solutions to Combat Advanced Threats

Cyberattack tactics and techniques have expanded and advanced, and with it, must your cybersecurity stack. A mature, end-to-end cybersecurity strategy is key to business longevity, customer retention, and overall profitability.

In years past, you may have been able to get away with an antivirus (AV) or endpoint detection and response (EDR) solution, but those days are gone. Traditional AV solutions only detect known threats and find evidence of compromise once an attack has occurred. It quickly becomes out of date and is often too late. A step up from AV, EDR solutions focus on endpoint security and rely on automated processes and machine learning algorithms—defensive layers advanced adversaries can easily surpass.

It's time to mature your security stack. By adding Blackpoint Cyber to your arsenal of vendor solutions, you'll benefit from a live, 24/7 team of security experts and threat hunters protecting you from the latest advanced cyberthreats in real time. With former military and USG (U.S. government) experience, the Blackpoint team knows what to look for, instead of relying on limited rules and machine learning.

Detect First and Respond Fast

Taking Integrations One Step Further

Traditional integrations simply add context and continuity, which benefits the customer and vendor user experience. For example, Blackpoint's integration with Cisco Meraki adds device and network information, enhancing the live network map within our proprietary technology, SNAP-Defense.

Comparatively, with Blackpoint's Managed EDR solution, our around-the-clock security operations center (SOC) team not only ingests the solution's metadata, but also reviews and triages their actionable alerts, resolving threats immediately on your behalf.

Expertise
Outsource your EDR management to a team of industry experts

Scalability
Increase your endpoint count with ease while reducing alert fatigue

Proactivity
Benefit from real-time threat hunting for early detection

Efficiency
Accelerate response times with a cohesive security stack

MANAGED EDR SOLUTIONS

Bitdefender   CROWDSTRIKE   CYLANCE   Malwarebytes

Microsoft Defender for Endpoint   SentinelOne   SOPHOS   WEBROOT opentext Business Solutions
