

One Platform. Complete Context. One Clear Path to Security Outcomes.

CompassOne Core Edition

CompassOne is your full-stack cybersecurity partner, built to strengthen security posture, reduce risk with real-time response, and give teams complete visibility of assets, identities, and vulnerabilities. It combines powerful MDR and ITDR technology with a 24/7 human-led, AI-powered SOC. The result is a more mature, efficient security program where threats are detected sooner, risks are prioritized clearly, and action is faster with measurable results.

Connected Capabilities. Complete Protection.

Unified 24/7 Detection and Response

Expert analysts, contextual intelligence, and patented detection technology across endpoints, cloud, and identities.

Cloud Posture

Automate and manage your cloud policies.

Vulnerability Management

Prioritized remediation guidance.

Security Posture Rating

Track progress and demonstrate ROI.

Third-party Integrations

Connect security and business management tools.

Asset Inventory

Improve visibility of devices, users, and applications.

Application Control

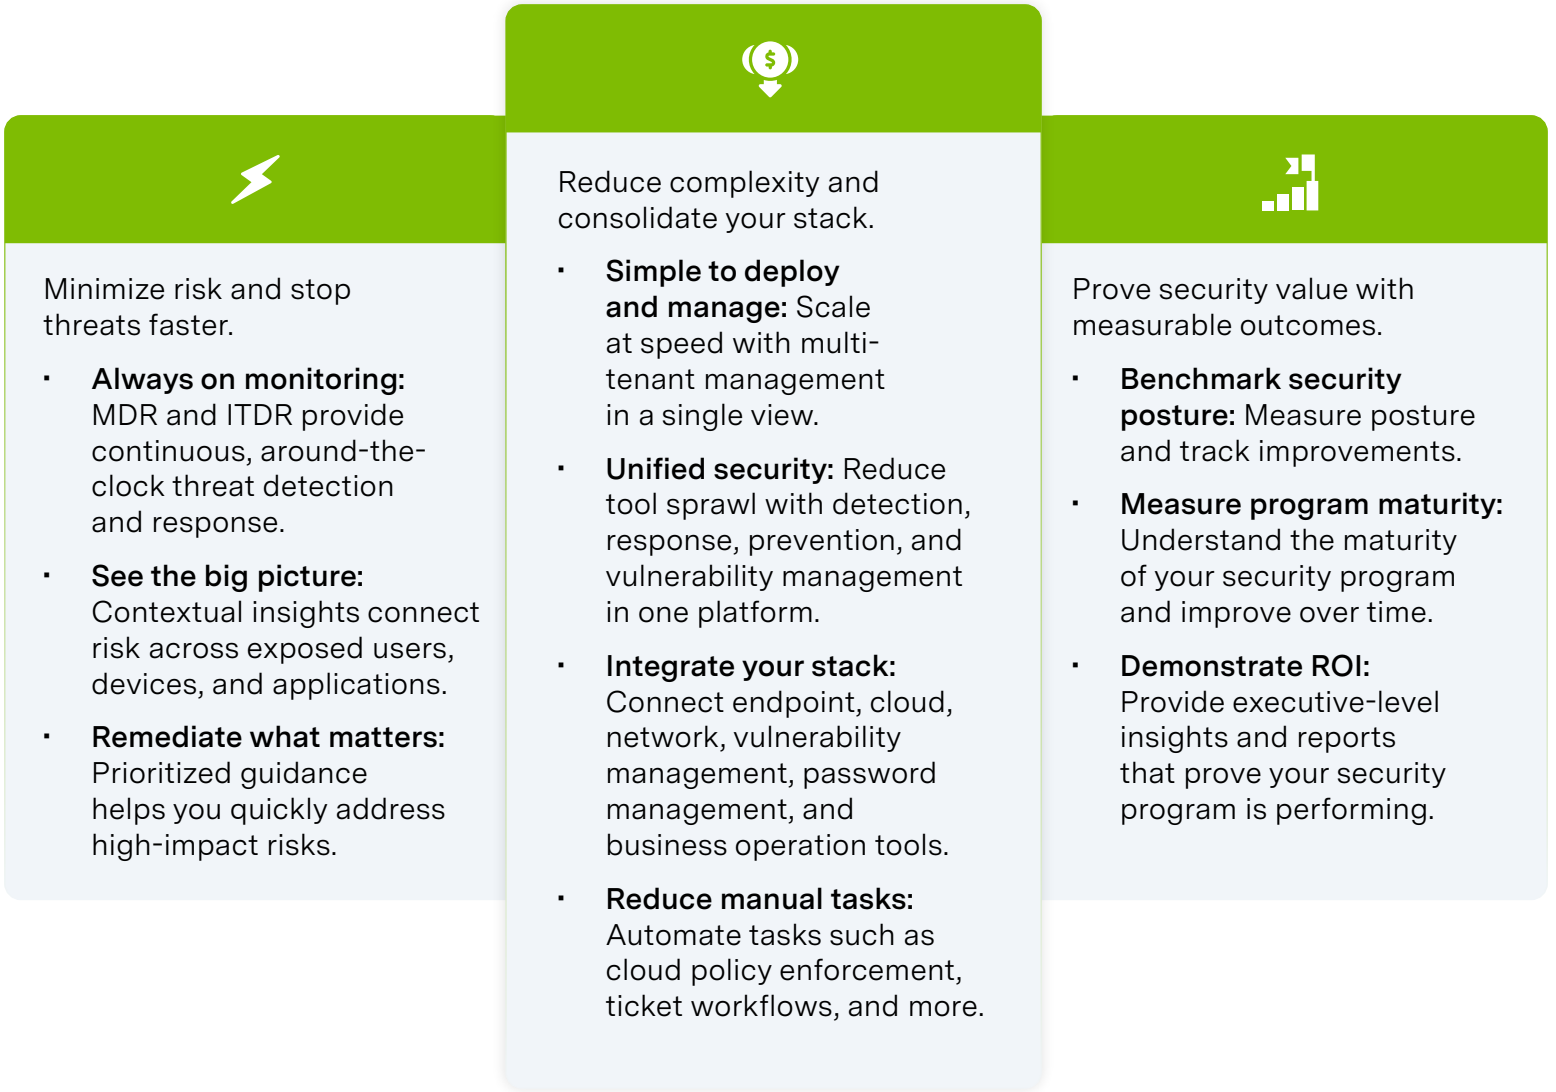

Block unauthorized and risky apps from being used.

Reduce time to detect.

“It takes an average of 241 days to identify and contain and active breach.”

IBM,
Cost of Data Breach 2025

Simplify Operations. Accelerate Response. Prove Impact.

Minimize risk and stop threats faster.

- **Always on monitoring:** MDR and ITDR provide continuous, around-the-clock threat detection and response.
- **See the big picture:** Contextual insights connect risk across exposed users, devices, and applications.
- **Remediate what matters:** Prioritized guidance helps you quickly address high-impact risks.

Reduce complexity and consolidate your stack.

- **Simple to deploy and manage:** Scale at speed with multi-tenant management in a single view.
- **Unified security:** Reduce tool sprawl with detection, response, prevention, and vulnerability management in one platform.
- **Integrate your stack:** Connect endpoint, cloud, network, vulnerability management, password management, and business operation tools.
- **Reduce manual tasks:** Automate tasks such as cloud policy enforcement, ticket workflows, and more.

Prove security value with measurable outcomes.

- **Benchmark security posture:** Measure posture and track improvements.
- **Measure program maturity:** Understand the maturity of your security program and improve over time.
- **Demonstrate ROI:** Provide executive-level insights and reports that prove your security program is performing.
