

REAL ANALYSTS. REAL RESPONSE. REAL PROTECTION.

We Don't Watch Attacks. We Stop Them.

Blackpoint's SOC is staffed by former U.S. intelligence cyber experts trained in offensive tradecraft. The team combines EDR, ITDR, and AI-driven detection and response to hunt, investigate, and contain threats before attackers can cause damage, giving MSPs 24/7/365 protection as an extension of their own team.

The Blackpoint Security Operations Center

Stopping threats before they become incidents.

Extend Your Team

Direct access to the experienced SOC analysts behind EDR and ITDR.

Reduce Operational Burden

Detection, investigation, and response handled for you.

Protect Clients Around the Clock

A follow-the-sun model for 24/7 detection and response.

Prove Your Value

Client-ready reporting that demonstrates threats were stopped before impact.

REAL-WORLD EXAMPLE

Other Tools Missed It. Blackpoint Stopped It.

A threat actor used a trusted Windows binary to harvest admin credentials through repeated API requests. The client was also running Huntress and Arctic Wolf, but neither generated an alert in this scenario.

Blackpoint identified and stopped the attack in 12 minutes:

- T+00:00** curl.exe activity flagged as a credential-harvesting IOC
- T+00:03** Host automatically isolated to stop lateral movement
- T+00:09** Senior analyst began a full process-tree investigation
- T+00:12** Customer notified by phone with a full incident briefing

“Over the past five years, Blackpoint's SOC has been a trusted extension of our team. Every minute matters when protecting our clients from today's cyber threats.”

Sean Furman, President, STF Consulting

EXPERTISE THAT ACTS. OUTCOMES YOU CAN SHOW.

Speed That Protects the Business

- **Contain first:** The SOC stops malicious activity immediately, then notifies MSPs via phone and email with the incident and resolution summary.
- **Faster response:** Purpose-built AI, trained on real analyst decisions, detects and contains threats in seconds.
- **Early kill-chain detection:** Proactive threat hunting stops cyber threats before they become breaches.

Analysts Who Think Like Attackers

- **Offensive expertise:** Proven offensive analysts continuously trained on evolving tradecraft.
- **Behavioral-based detection:** Learns what's normal for each environment to act on real threats and reduce noise.
- **Rapid threat containment:** Analysts validate threats and act immediately to prevent breaches.

Intelligence That Grows the Business

- **A competitive advantage:** Threat intelligence and expert analysis help MSPs demonstrate security expertise and build client trust.
- **Proof of protection:** Validate security value with reporting that shows threats contained before they could cause damage.
- **Trusted security advisor:** Environment-specific insights help MSPs deliver strategic guidance.
